

Introduction to dashboards

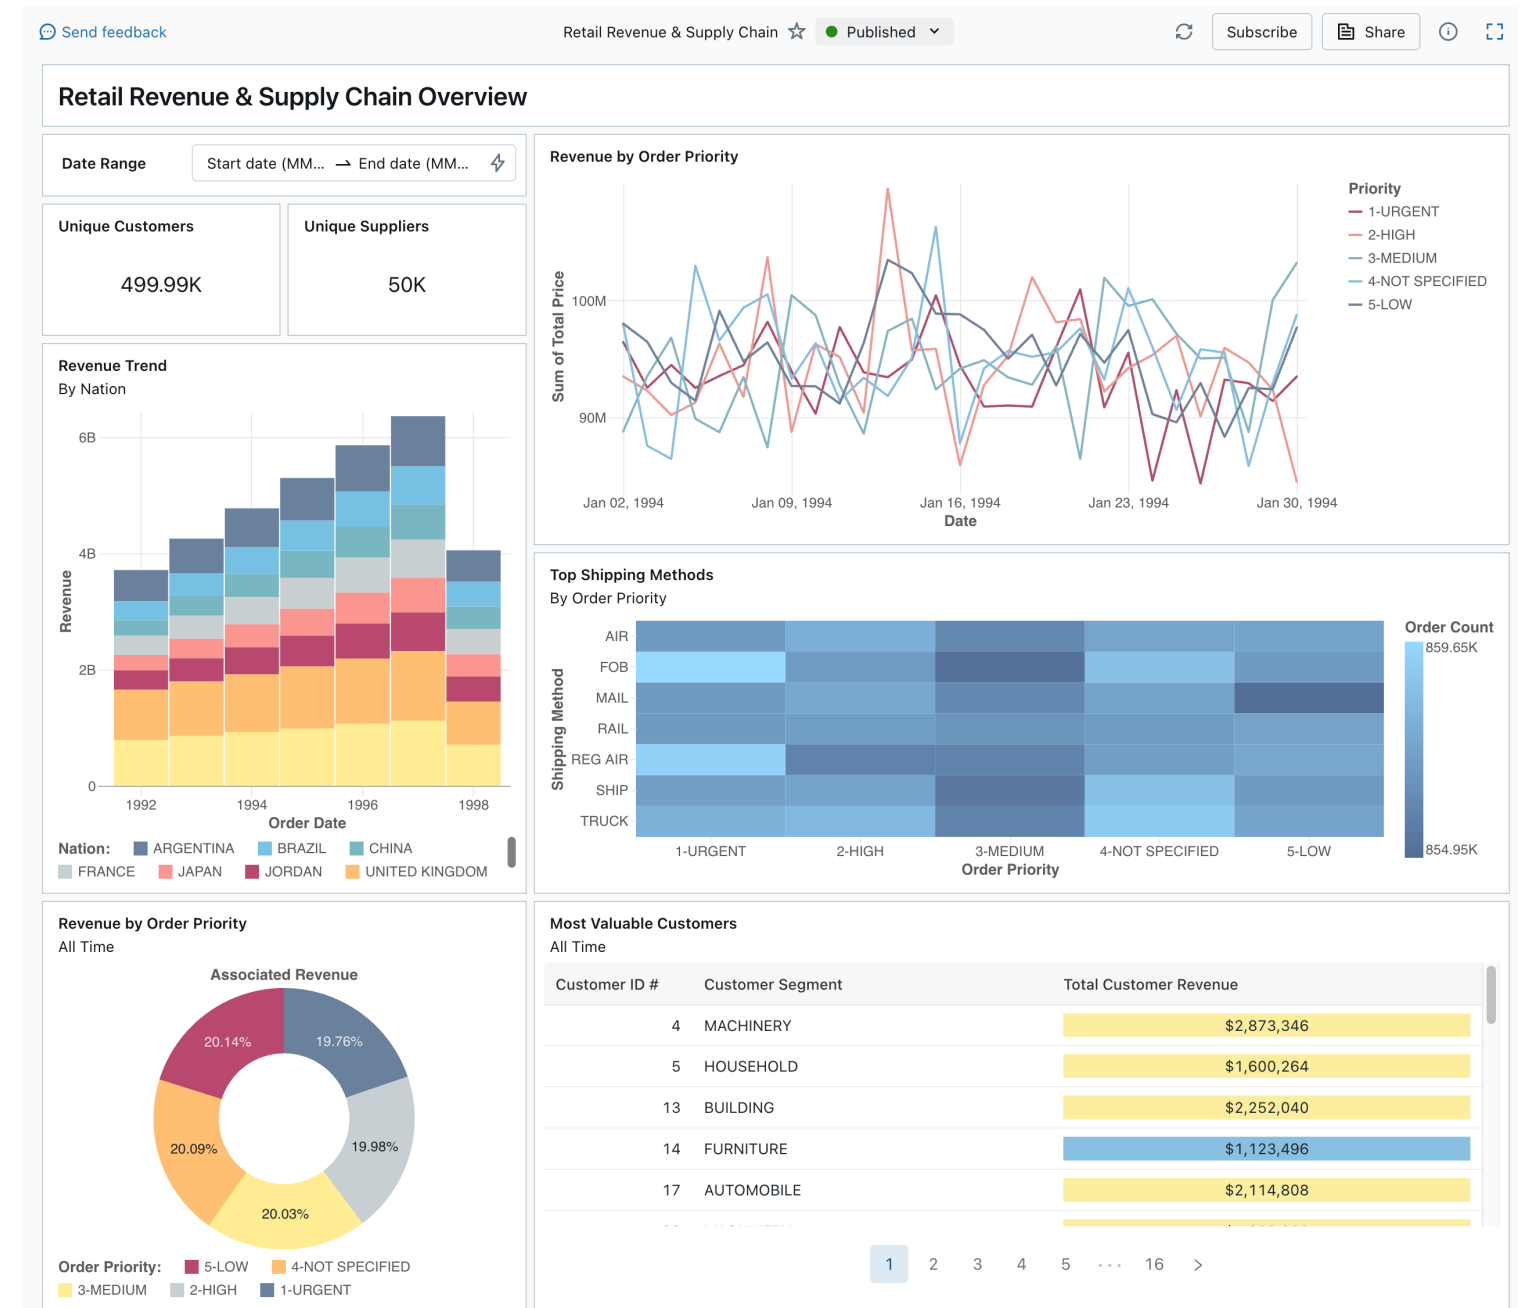

DATA VISUALIZATION IN DATABRICKS

Gang Wang
Senior Data Scientist

What is a dashboard?

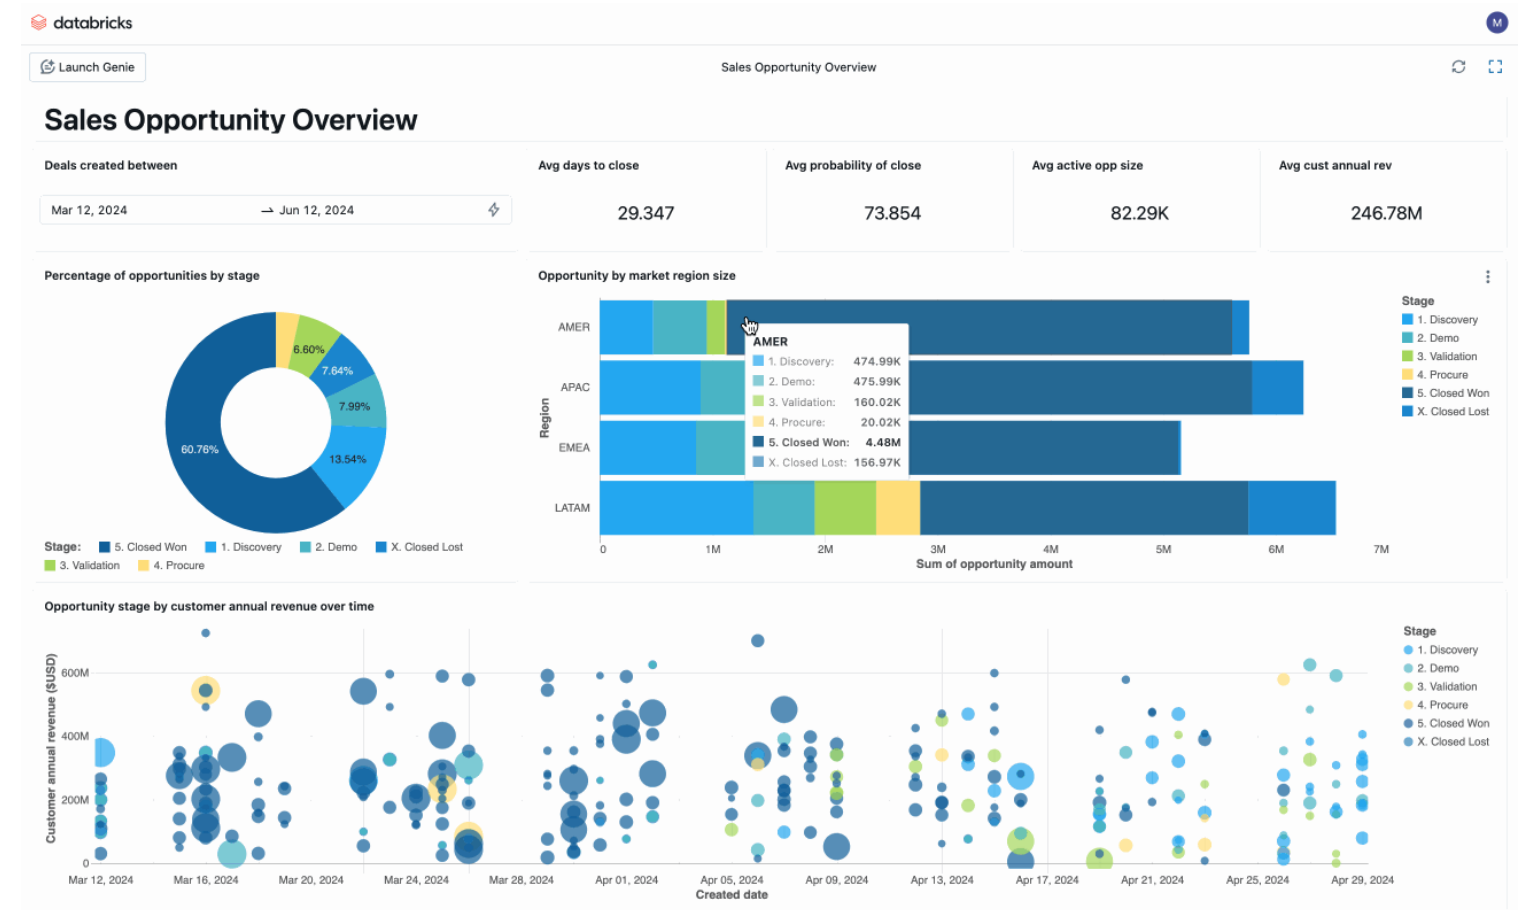

- Is a space for multiple visualizations
- Displays related data together
- Simplifies complex information
- Helps compare metrics at a glance

Dashboards improve decision-making

Dashboards can:

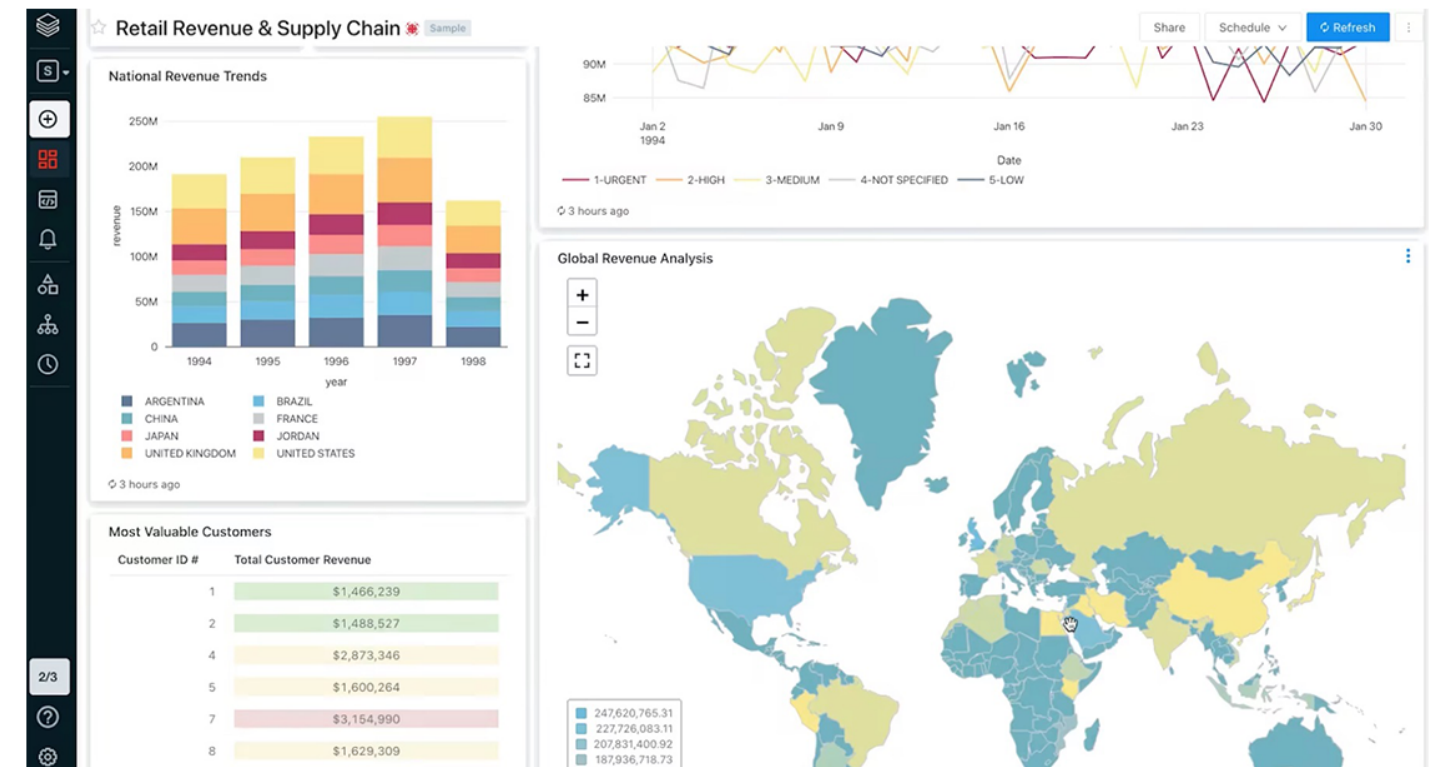

- Identify trends quickly
- Track real-time data
- Make faster, informed decisions
- Support business strategy

Key components of a dashboard

Components:

- Bar Charts: compare values
- Line Charts: show trends
- Maps: visualize locations
- Counter Plots: show key performance indicators (KPIs)
- Filters and tools: customize views

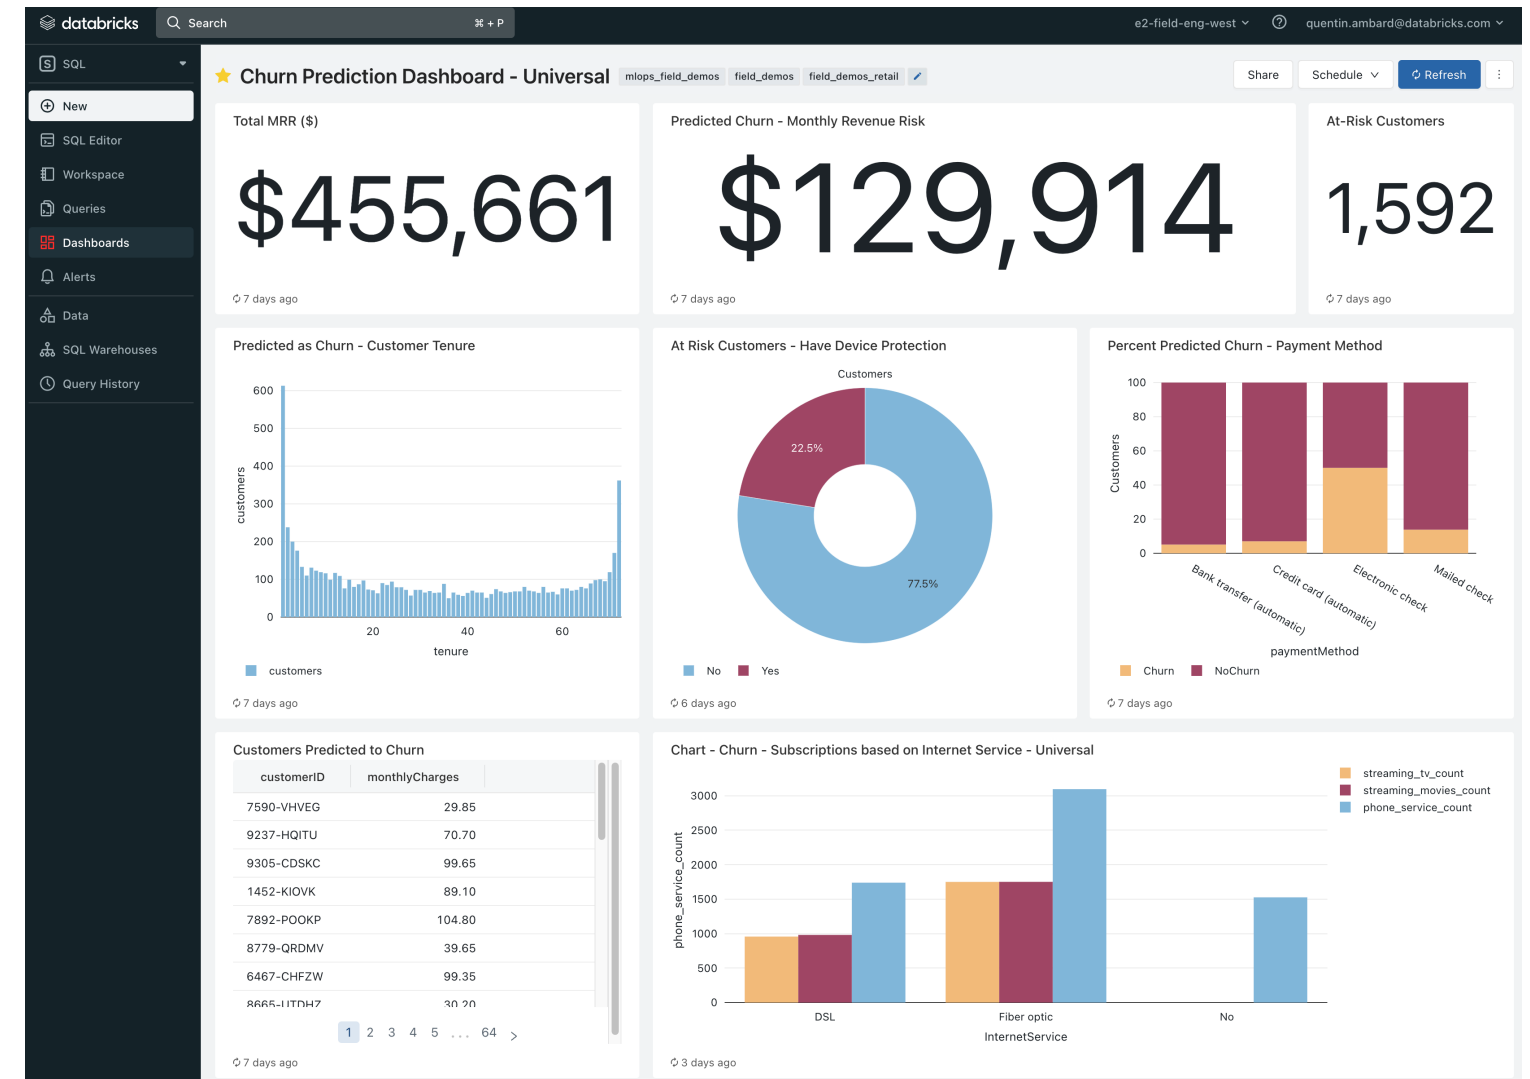

Dashboards bring insights together

Dashboards

- Create clear views of your data
- Combine visuals to tell a story

Next

- Learn how to create dashboards
- Customize layout and style

DATA VISUALIZATION IN DATABRICKS

Refreshing a dashboard

DATA VISUALIZATION IN DATABRICKS

Gang Wang
Senior Data Scientist

Why do dashboards need refreshing

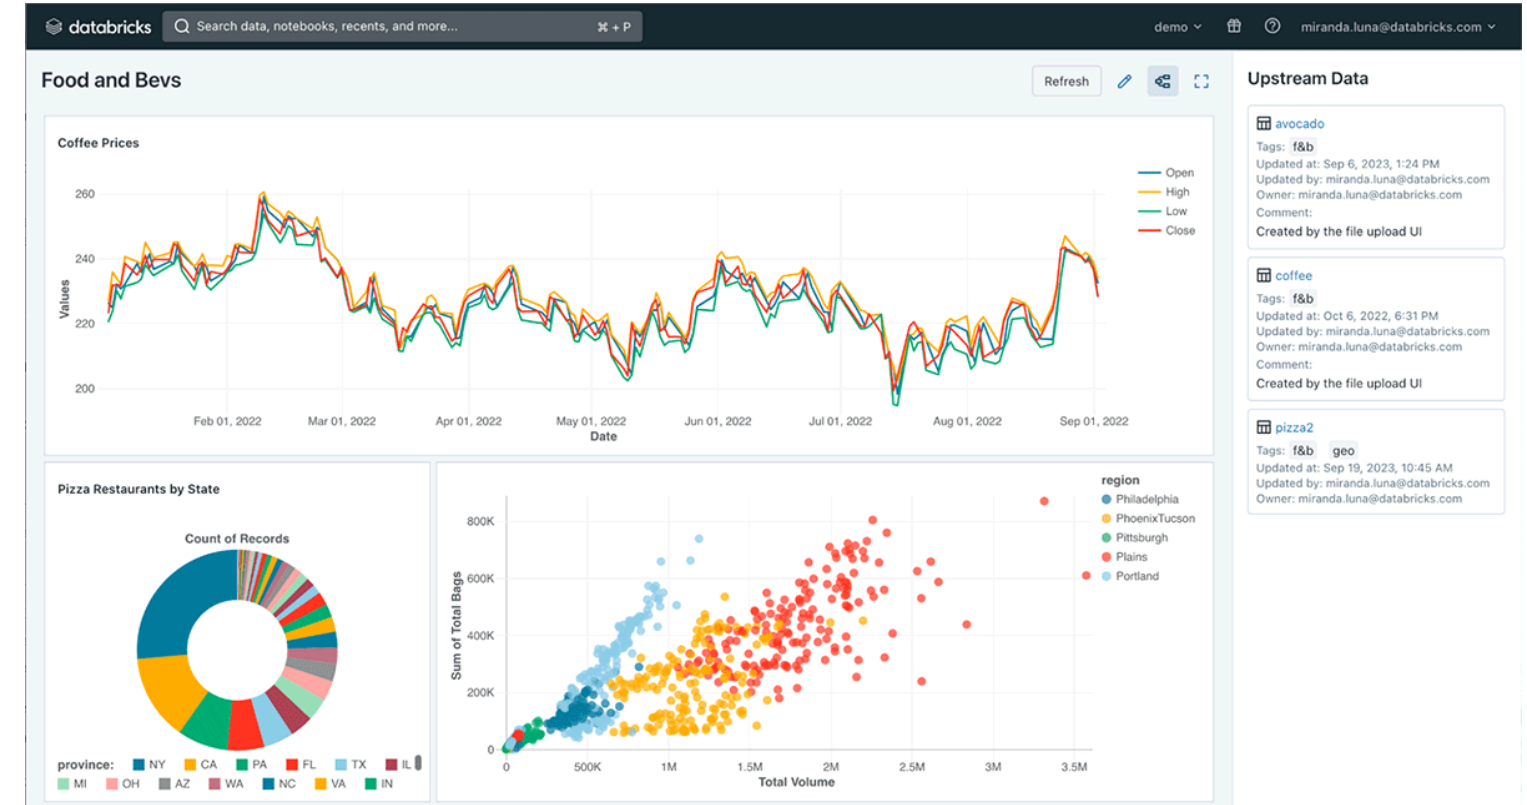

- Ensure current data is displayed
- Reflect real-time changes
- Improve decision-making accuracy
- Avoid outdated insights
- Track dynamic business performance

Benefits of regular dashboard refreshes

- Enable real-time monitoring
- Prevent old or misleading data
- Enhance visibility of key trends
- Spot opportunities quickly
- Adapt to shifting data trends

Refresh frequency and best practices

- Set automatic refresh intervals
- Balance frequency to avoid lags
- Refresh relevant sections only
- Monitor for system performance
- Prevent manual update overload
