

Data exploration with Data Explorer

DATA MANAGEMENT IN DATABRICKS

Smriti Mishra
Data Engineer

Your data GPS

- Locate and understand data tables for analysis alignment.
- Enable secure, efficient data exploration and compliance.

Navigating the Data Explorer

- User-friendly navigation through databases, tables, and views
- Quick data previews and structural insights

Navigating the Data Explorer

- User-friendly navigation through databases, tables, and views
- Quick data previews and structural insights
- **Example:**
 - Preview customer transaction datasets to ensure consistency
- Verifies data formats and key field integrity

Securing your data with ease

- Acts like a gatekeeper controlling access to a vault
- Streamlined access control and permissions management
- Aligns with organizational data governance standards

Ownership matters

- Quickly identify and manage table ownership
- Assign or transfer ownership as needed
- Table owners act like dataset "stewards"
- Owners ensure data access, quality, and compliance

Data quality accountability

- Table owners manage access and data quality
- Regular permission reviews and usage monitoring
- Ongoing oversight key to data quality and compliance

Let's Practice!

DATA MANAGEMENT IN DATABRICKS

Managing access and understanding PII

DATA MANAGEMENT IN DATABRICKS

Protecting sensitive information

Managing access rights in Databricks

- Managing access in Data Explorer is vital for governance
- Control who accesses specific areas, like securing a building
- Assign, modify, and revoke table permissions as needed

Understanding access levels

- Different implications of access levels
 - Example: Read-only access is for viewing only
- Full access allows updates and maintenance to be performed

What is Personally Identifiable Information (PII)?

- PII includes data that identifies individuals
 - Examples: names, social security numbers
- Some industries require have strict rules on handling PII data
 - healthcare, finance, and government
- Compliance with laws like GDPR and HIPAA is mandatory
- Regulations govern PII storage, access, and sharing

Addressing industry-specific challenges

- PII challenges vary by industry and location
- **Example:**
 - GDPR compliance is crucial for EU e-commerce
- Strict rules for storing and processing customer data

Ensuring security and compliance

- Secure data and build trust
- Follow data privacy laws
- Manage PII for privacy and integrity

Let's practice!

DATA MANAGEMENT IN DATABRICKS

Congratulations!

DATA MANAGEMENT IN DATABRICKS

Smriti Mishra

Founder, NordData Insight

Chapter 1

- Mastered Delta Lake basics
- Learned ACID transactions
- Used schema enforcement
- Ensured organized data

Chapter 2

- Created and managed views
- Optimized temp views
- Streamlined workflows
- Maintain clean data

Chapter 3

- Explored data with Data Explorer
- Preview, secure, and manage sensitive data
- Protected PII effectively
- Assigned table ownership

The future

Congratulations!
